Much has been said and written about Japan's manufacturing prowess. Most ofthe comment comes from people who are merely visitors to the country and can be best classified as 'observers looking in from the outside'. Other views come from the Japanese themselves in which the double barrier of culture and language filters out much information that would be of real value to Western industrialists. Neither of these limitations apply to John Hartley, who has been resident in Japan for the past five years. He understands the culture, can speak the language and has extensive contacts at the highest level. Therefore, he is in a unique position to report on the Japanese scene and its activities in advanced manufacturing technology. This he has been doing on a regular basis to IFS magazines: The Industrial Robot, Assembly Automation, Sensor Review and The FMS Magazine. Most of the material in this book is from John Hartley's 'pen' and represents his most significant contributions on flexible automation in Japan to these journals over the last three years. It is augmented with a few other articles written by leading authorities on new technology in Japanese manufacturing industry.

An exciting area of collecting for clock and watch enthusiasts is literally opened up with this book. On the outside the automatic wristwatch is like its counterpart, but once the case is opened a different world appears. Here 200 watches are shown, each with three photos to show the dial, and the complete and partly disassembled movement. The book introduces all the Swiss manufacturers and provides an historical overview of the development of automatic watches from 1926 to 1978. Information on the functioning mechanism and construction of each design is offered along with the data needed to locate the watches chronologically.
