This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. Mathematics for Carpentry and the Construction Trades, Third Edition, offers a unique approach based on the authors' experience in building construction and applied education. Loaded with photographs and detailed drawings, the text illustrates the underlying mathematics in each step of the building process. The text's problems, infused with the authors' real industry experience, provide students with relevant examples of problems they will face in the construction and carpentry trades. Problems include step-by-step summary explanations of their solutions with the necessary steps highlighted for easy identification. After giving students a solid foundation in math, the text then leads them through the steps of a construction project and applying the mathematical skills involved in completing the project.

Carpentry and Building Construction is widely used for vocational building construction programs in secondary and post-secondary schools. The fifth edition has been completely updated and expanded, so you can be sure your teaching is technically correct and state of the art. This comprehensive text covers everything from print reading to painting.
