Text only. This product does NOT include a Resource Central Access Code Card. To purchase the text with a Resource Central Access Code Card, please use ISBN: 0-13-281811-6 For more than 30 years, International Trauma Life Support has been at the forefront of trauma education at all levels of emergency care worldwide. This practical, hands-on training offers a complete reference covering all skills necessary for rapid assessment, resuscitation, stabilization, and transportation of the trauma patient. Updated with new photos and the latest approaches to the care of the trauma patient, this seventh edition conforms to the most recent AHA/ILCOR guidelines for artificial ventilation and CPR.

As the required textbook for NAEMT's worldwide prehospital trauma life support courses, this is the definitive resource for learning basic and advanced prehospital trauma skills and concepts. Now revised and expanded to cover all aspects of military prehospital trauma with 12 new chapters, this edition is tailored expressly for the military.

Every day thousands of people are killed and injured on our roads. Men, women or children walking, biking or riding to school or work, playing in the streets or setting out on long trips, will never return home, leaving behind shattered families and communities. Millions of people each year will spend long weeks in hospital after severe crashes and many will never be able to live, work or play as they used to do. Current efforts to address road safety are minimal in comparison to this growing human suffering. The World Health Organization and the World Bank have jointly produced this World rep.

Describes how to structure and build an automated testing regime that will give lasting benefits in the use of test execution tools to automate testing on a medium to large scale. Offers practical advice for selecting the right tool and for implementing automated testing practices within an organization, and presents an extensive collection of case studies and guest chapters reflecting both good and bad experiences in test automation. Useful for recent purchasers of test automation tools, technical managers, vendors, and consultants. The authors are consultant partners in a company that provides consultancy and training in software testing and test automation. Annotation copyrighted by Book News, Inc., Portland, OR

Product 15-1058

This volume had its origin at a conference held in 1978 at the East- West Center that considered the short- and long-term energy problems of the Asia-Pacific region. That group of national energy policymakers, scientists, and technologists agreed that providing adequate energy for the rural areas of the developing countries looms large as one of the more critical problems of the region. Encouraged by this consensus, the East-West Resource Systems Institute obtained a grant from the Agency for International Development for the purpose of initiating a collaborative, multi-country study of rural energy problems. The National Research Council of Thailand and the East-West Center agreed to work closely together as twin foci for the coordination of the effort.

This book shows how a wide range of contexts for learning science can be used outside of the classroom, and includes learning: at museums, science centres and planetaria from newspapers, magazines and through ICT at industrial sites and through science trails at zoos, farms, botanic gardens, residential centres and freshwater habitats in school grounds. With contributions from well known and respected practitioners in all fields of science education and through using case studies, Learning Science Outside the Classroom offers practical guidance for teachers, assistant teaching staff and student teachers involved in primary and secondary education. It will help enable them to widen the scientific experience and understanding of pupils. The advice in this book has been checked for safety by CLEAPSS.

PHTLS: Prehospital Trauma Life Support, Military Edition consists of the PHTLS core content and features thirteen chapters written by military prehospital trauma care experts for practitioners in the military environment. PHTLS: Prehospital Trauma Life Support, Military Edition is created in partnership between the National Association of Emergency Medical Technicians (NAEMT) and the Committee on Tactical Combat Casualty Care (C-TCCC). Since 1996, TCCC has improved the care rendered in combat prehospital environments. TCCC is the battlefield prehospital component of the Joint Trauma System, an organization within the United States Department of Defense that projects combat trauma care out to the point of injury and continues that care seamlessly while bringing the casualty home for recuperation and rehabilitation. TCCC guidelines are continuously revised and updated by C-TCCC, an all-volunteer group of military medicine and trauma care specialists. The membership of C-TCCC includes combat medics, corpsmen, and paramedics as well as physicians and physician assistants.

The Tactical Emergency Casualty Care Course Manual is the printed component for the NAEMT's 16-hour continuing education Tactical Emergency Casualty Care (TECC) Course. It may be used by both instructors and students as a resource to prepare for the TECC course and as a reference that discusses the current best practices for EMS providers to utilize in the response to and care of patients in a civilian tactical environment. The TECC Course does not offer certification as a tactical medic it is intended to teach all EMS providers the best patient care and safety practices in a civilian tactical environment, such as an active shooting hostile event. Composed of 10 lessons, The TECC Course Manual will: Cover the phases of care in a civilian tactical environment, Describe step-by-step the life-saving skills that may be performed in a civilian tactical environment, Provide safety and survival strategies for EMS providers and their patients In addition to the TECC Course Manual, instructors may also purchase the TECC Online Instructors Toolkit (9781284483888). This resource features 10 lesson presentations in PPT, as well as interactive patient simulations and skill stations that allow students to gain experience in a safe environment monitored by experienced EMS providers.
