Issue for state and local governments—not the federal one. It's not a coincidence that the more the federal government has inserted itself into public education over the years, the worse our kids have fared.

Washington dangles millions of dollars in front of states and then tells them what they have to do to get it. It's backdoor nationalization of education—and it's leading us to ruin. In Conform, Glenn Beck presents a well-reasoned, fact-based analysis that proves it's not more money our schools need—it's a complete refocusing of their priorities and a total restructuring of their relationship with the federal government. In the process, he dismantles many of the common

In *Letters to a Young Education Reformer*, Frederick M. Hess distills knowledge from twenty-five years of working in and around school reform. Inspired by his conversations with young, would-be reformers who are passionate about transforming education, the book offers a window into Hess's thinking about what education reform is and should be. Hess writes that "reform is more a matter of how one thinks about school improvement than a recital of programs and policy proposals." Through his essays, he explores a range of topics, including:

- Talkers and Doers
- The Temptations of Bureaucracy
- The Value in Talking with Those Who

a comprehensive analysis of the linkage of different educational ideas, policies, and practices to a commitment for democratic schooling. Informed by significant, interdisciplinary research, as well as by his own extensive professional experiences as a teacher, professor, department chair, and dean, Teitelbaum examines contemporary concerns related to three broad areas: 1) teaching and teacher education; 2) curriculum studies; and 3) multiculturalism and social justice. His approach is to integrate the current and the historical, the practical and the theoretical, the technical and the socio-political, and the personal and the structural. With this volume, Teitelbaum considers

for the first time an international collection of work focused on two important aspects of any young child's life – learning mathematics and starting primary or elementary school. The chapters take a variety of perspectives, and integrate these two components in sometimes explicit and sometimes more subtle ways. The key issues and themes explored in this book are: the mathematical and other strengths that all participants in the transition to school bring to this period of a child's life; the opportunities provided by transition to school for young children's mathematics learning; the importance of partnerships among adults, and among adults and children, for effective school

the demands of new educational policies, including national standards. This book details how one school integrated equity pedagogy into a standards-based curriculum and produced exemplary levels of achievement. As the authors illustrate, however, the school's dual commitment to bilingual education and standards-based reform engendered numerous complex tensions. Specifically, the authors describe teachers' attempts to balance demands for rigor and content coverage within their high-performing school and with their diverse student population. They identify specific tensions that emerged around the following issues: the degree of academic struggle that is
