A New York Times bestseller! An Amazon Best Books of 2014 selection "If you're reading this, it means I'm already dead. Just kidding." In 2009, at thirty years old, Bryan Bishop's life was right on track. Known to millions as "Bald Bryan," the sidekick and soundman on the record-setting podcast, The Adam Carolla Show, his radio career was taking off. He was newly engaged. Then, he and his fiancée Christie were delivered a crushing blow when he was diagnosed with a brain stem glioma--an inoperable brain tumor. Suddenly Bryan's promising future was transformed into a grueling schedule of radiation and chemotherapy while facing his mortality. In this poignant narrative that is alternately heartbreaking and hysterical, Bishop shares the surreal experiences of writing his will with the bravado of a pulp novelist, taking chemo in a strip club, and (technically) the closest he ever got to achieving his lifelong dream of a threesome--when a physical therapist had to show his wife how to bathe him in the shower during his weakened state. Whether recounting his search for the most aggressive form of treatment, how radiation treatment jeopardized his ability to (literally) walk down the aisle or even smile for his wedding photos, or recalling the time his wife inadvertently drugged him in a pool in Maui, Bishop's inimitable voice radiates through his story. As the author celebrates how treatment shrunk his tumor and gave him a new lease on life, Shrinkage reveals the resilience of the human spirit--and the power of laughter--during even the darkest times.

In this study the author analyses similarities, differences and contradictions in the cultural norms about gender expressed in proverbs she has found in oral and written sources from over 150 countries. Grouping the proverbs into categories as the female body, love, sex, childbirth and the female power, the author examines shared patterns in ideas about women and how men see them.

Intensity-modulated radiation therapy (IMRT), one of the most important developments in radiation oncology in the past 25 years, involves technology to deliver radiation to tumors in the right location, quantity and time. Unavoidable irradiation of surrounding normal tissues is distributed so as to preserve their function. The achievements and future directions in the field are grouped in the three sections of the book, each suitable for supporting a teaching course. Part 1 contains topical reviews of the basic principles of IMRT, part 2 describes advanced techniques such as image-guided and biologically based approaches, and part 3 focuses on investigation of IMRT to improve outcome at various cancer sites.

Rickard Rebellino, S. R. Toliver, Jason Vanfosson, Sarah E. Whitney, and Casey Alane Wilson While critical and popular attention afforded to twenty-first-century young adult literature has exponentially increased in recent years, classroom materials and scholarship have remained static in focus and slight in scope. *Twilight*, *The Hunger Games*, *The Fault in Our Stars*, and *The Hate U Give* overwhelm conversations among scholars and critics—but these are far from the only texts in need of analysis. *Beyond the Blockbusters: Themes and Trends in Contemporary Young Adult Fiction* offers a necessary remedy to this limiting perspective, bringing together essays about the many subgenres, themes, and character types that have until now been overlooked. The collection tackles a diverse range of topics—modern updates to the marriage plot; fairy tale retellings in dystopian settings; stories of extrajudicial police killings and racial justice. The approaches are united, though, by a commitment to exploring the large-scale generic and theoretical structures at work in each set of texts. As a collection, *Beyond the Blockbusters* is an exciting entryway into a field that continues to grow and change even as its works captivate massive audiences. It will prove a crucial addition to the library of any scholar or instructor of young adult literature.
