"I think we need a new crystal for this thing." --Scanner guy from the 70sScanners were a lot simpler in decades past, when everything was analog, had a fixed frequency, and was unencrypted. Nowadays, we have those old analog stations as well as digital, trunking systems, protocols, sites, talk groups, and who-knows-what coming down the road for next year. There are a lot of frequencies, systems, groups, codes, and little nit-picky details that have to go into our radios before we can even pick up a single call. On the other hand, radios continue to get more and more powerful, and unfortunately, more complicated to handle all the new options. This doesn't make programming them any easier. Fortunately, we have computers to handle all the programming stuff for us. Just hook the radio up to the computer, find your location on a website, transfer the frequency and channel data into the radio, and you're good to go. Sounds simple, doesn't it? If you've tried to program a digital trunking system, you know how complicated these things can get, and just how unhelpful the manuals can be. Wouldn't it be nice to just have someone go through the process and just "get the damned thing working" without all the theory? Fortunately, there are a combination of tools that you need to master to even begin. FreeSCAN is free software that works with a large number of common scanners

and works for both analog and digital systems. FreeSCAN even has tools to import and set up all the frequencies automatically. If you're already comfortable programming digital trunked systems through the number pad, or have no trouble working with whatever software came with your radio, then maybe this book isn't for you. If you aren't good with computers, or you're having trouble with the basic process, don't know the difference between a talk group, site, and system, or are otherwise pulling your hair out trying to get your radio programmed, then this book is for you! We'll walk through getting the software installed and set up, connecting your radio with an appropriate cable and communications port, reading data from the radio, downloading and fine-tuning new frequency data, setting quick keys and locking out extraneous frequencies, and writing that data back out to the radio.

∫Biosafety in Microbiological & Biomedical Labs.∫ quickly became the cornerstone of biosafety practice & policy upon first pub. in 1984. The info. is advisory in nature even though legislation & reg∫n., in some circumstances, have overtaken it & made compliance with the guidance mandatory. This rev. contains these add∫l. chap.: Occupat∫l. med. & immunization; Decontam. & sterilization; Lab. biosecurity & risk assess.; Biosafety Level 3 (Ag.) labs.; Agent summary state. for some ag. pathogens; & Biological toxins. Also, chapters on the principles & practices of biosafety & on risk assess. were expanded; all agent summary state. & append. were rev.; & efforts were made to harmonize recommend. with reg∫s. promulgated by other fed. agencies.

The human rights records of more than ninety countries and territories are put into perspective in Human Rights Watch's signature yearly report. Reflecting extensive investigative work undertaken in 2016 by Human Rights Watch staff, in close partnership with domestic human rights activists, the annual World Report is an invaluable resource for journalists, diplomats, and citizens, and is a must-read for anyone interested in the fight to protect human rights in every corner of the globe.

Mobile Money is a booming industry in an increasing number of countries worldwide. The project results from increased demand for guidance and technical assistance from governments after the 2008 publication of an exploratory paper, Integrity in Mobile Phone Financial Services, which discussed mobile money and the application of international anti-money laundering (AML) and combating the financing of terrorism (CFT) standards. For most, how to craft a regulatory regime that expands access to financial services to the poor through the development of mobile phone financial services, but compliant with AML/CFT standards remains elusive. Specific AML/CFT regulations related to mobile money have not been issued in many jurisdictions, mainly due to the lack of awareness of the risks these services can pose if the right controls are not in place. Because the international standards for AML/CFT, the Financial Action Task Force s 40 + 9 Recommendations were designed and issued well before mobile money technology and business models became prevalent, even developed countries have begun to face challenges with their regulation. The project team aims to provide practical guidance to jurisdictions and the Industry on how to draft regulations and internal guidelines that allow them to comply with AML/CFT standards with enough flexibility for mobile money to thrive. Specifically, the paper (1) takes stock of new AML/CFT regulations and practices relevant to Mobile money, (2) design guidelines for drafting AML/CFT regulations that cover mobile money and (3) propose examples of best practices for the Industry to include AML/CFT in their own business model.
